ABOUT ME

I love working with creative teams on projects to solve real-world problems. I'm always eager to learn new technologies for the success of a project.

EXPERIENCE

RGF Talent Solutions

Full Stack Engineer

Tokyo, Japan

(May 2025 - present)

- Recruitment CRM & Application Tracking System
 - Developed and maintained RGF's core CRM and applicant tracking platform, supporting recruitment operations across Japan, India, Singapore, and Hong Kong.
 - Built features for job applications, candidate management, contracts, resume parsing, and advanced candidate search.
 - Developed the frontend using **Angular** and the backend on **Salesforce**, supported by microservices running on **AWS**.
 - Used **Jenkins** to manage CI/CD pipelines.
 - Implemented email synchronization between **Microsoft Outlook** and **Salesforce**, enabling recruiter communications to be captured within the CRM.
 - Built a **Microsoft Teams** integration using **Microsoft Graph API** to retrieve candidate meeting transcripts, process them with an LLM through **Amazon Bedrock**, extract structured information, and automatically update the corresponding candidate records in Salesforce.
 - Integrated **Daxtra** for CV parsing, candidate indexing, and improved candidate search.
 - Participate in, and facilitate Scrum activities- sprint planning, daily Stand ups and operational tasks such as user story creation, backlog refinement.

PVP Inc

Software Engineer

Tokyo, Japan

(Sep 2021 - April 2025)

- Social Media App for Artists
 - Led the **mobile app development team** (Aug 2023 - Apr 2025), assigning tasks, reviewing code, planning releases, and communicating technical decisions and progress to management and clients.
 - Designed the application architecture with a focus on **scalability**, **performance**, and **maintainability**.
 - Developed and launched the application for both **iOS** and **Android**.
 - Built the frontend with **Flutter** and **Dart**.
 - Built backend services with **Python**, **Flask**, **JavaScript**, and **ExpressJS**.
 - Deployed services on **Google Cloud** using **Cloud Run**, **Cloud Scheduler**, and **Pub/Sub**.
 - Used **Firebase** for application data, **Cloudflare R2** for media storage, and **Terraform** for infrastructure.

...continued

SKILLS

• Cloud & DevOps

- Cloud infrastructure and deployment
- CI/CD and infrastructure as code
- Containerization and serverless architecture
- Google Associate Cloud Engineer

• Backend & API Engineering

- System design, REST API and microservice development
- Third-party system integrations
- Data modeling and database management

• Frontend & App Development

- Responsive web application development
- Cross-platform mobile development

• System Design & Architecture

- Scalable and highly available systems
- Performance optimization
- Event-driven and asynchronous workflows

• Team Leadership & Communication

- Task assignment, mentoring, and code reviews
- Technical planning and release coordination
- Communication with management and clients
- Client presentations and technical demonstrations
- Cross-functional team collaboration

• Agile Development

- Scrum, sprint planning, and backlog refinement
- Requirements gathering and work estimation
- Progress tracking and stakeholder reporting

• Japanese Proficiency

- BJT J2

WorldTech Games

Junior Programmer (Intern)

Mumbai, India
(Dec 2020 - May 2021)

- 3D Shooting Game Development
 - Developed a 3D shooting game using **Unreal Engine** and **C++**.
 - Focused on core gameplay mechanics:
 - * **Weapon System**: Implemented shooting, reloading, ammo, and weapon switching.
 - * **Character Skills System**: Designed abilities, cooldowns, power-ups, and effects.

XR@Berkeley, UC Berkeley

Research Lab in UC Berkeley

California, USA
(Jan 2019 - Jun 2019)

- **VR Game Development**
 - Worked on a VR RPG game using **Unity** and **C#**.
 - Developed character movement, enemy AI, and skill system.
 - Created VFX and particle systems for immersive effects.

PROJECTS

- **Distributed GPU Render Farm**
 - Building a render farm that renders Blender projects using data-center GPUs and community-rented computers.
 - Splits each project across multiple GPUs based on GPU model, VRAM, render speed, price, and availability.
 - Completes large rendering tasks much faster than rendering on a single computer.
 - Built with **React**, **Tauri**, **Python**, and **FastAPI**.
 - Uses **Google Cloud Run**, **Neon PostgreSQL**, **Upstash Redis**, **Cloudflare R2**, **Vast.ai**, and **Modal**, deployed with **Docker** and **Terraform**.
- **Platform for Building and Running Autonomous AI Agents**
 - Building a platform for creating, running, reusing, and sharing autonomous AI agents.
 - Provides agents with tools for accessing files, browsers, terminals, user accounts, and persistent memory.
 - Allows each agent to ship with its own desktop application.
 - Includes a marketplace where users can publish and share agents.
 - Built with **Python**, **React**, **TypeScript**, and multi-model AI routing using **LiteLLM**.
 - Deployed on **AWS EC2** using **Terraform**.

EDUCATION

- **University of California, Berkeley**
Jan - June 2019

Computer Science, Entrepreneurship (Student exchange program)

- **SRM University, India**
June 2017 - May 2021

Amaravati, Andhra Pradesh
B.Tech in Computer Science and Engineering

TECHNICAL STACK

- **Languages**: Python, TypeScript, JavaScript, Dart, Apex, C#, SQL
- **Backend**: Flask, FastAPI, ExpressJS, Node.js
- **Frontend**: Angular, React, Flutter
- **Cloud**: AWS, Google Cloud, Cloudflare
- **AWS Services**: EC2, Fargate, S3, Bedrock
- **GCP Services**: Compute Engine, Cloud Run, Cloud Functions, Firebase, GCS
- **Cloudflare Services**: R2, Workers
- **DevOps**: Terraform, Docker, Jenkins
- **Platforms & APIs**: Salesforce, Microsoft Graph API, Daxtra, Unity
- **Databases**: PostgreSQL, Firebase, SOQL, Redis
