Company Overview (事業内容)

As a leading recruitment service provider in Asia, we provide a wide range of recruitment solutions in 18 cities across the region.

Job Description (業務内容)

Role Summary:

Design and develop new functions and features on the Angular application hosted on Salesforce platform, used for recruitment purpose by the business side.

Work as part of the CRM Development Team in an Agile environment, and under the supervision of the Development Lead for projects.

Role Details:

- > Design, code, unit test, debug, and maintain Angular applications.
- > Engage in the migration of our application from AngularJS (V1) to Angular latest version.
- > Participate in design decisions and code reviews to ensure best practices and high-quality code.
- > Partner with Product Owner and Business Analysts to create the best experience for our users.
- > Recommend, document, and follow best practices around source control, deployment, and issue tracking.
- > Provide complexity estimations and improvement suggestions for the development of features and tools for the CRM systems.
- > Be part of the team's journey to technical excellence, by proposing new ideas and technologies to the team.
- > When required, participate in the maintenance of a back-end codebase on force.com platform.
- > Assist QA team and user-support team by conducting technical investigation when required.

Requirements and Experience (必要な能力・経験・資格)

- > 1-2 years of experience in delivering Enterprise-grade applications as a member of a Development team.
- > 1 year minimum of experience on front-end technologies, with a strong knowledge of at least one modern front-end framework (Angular, React, Vue,...).
- > Experience in Object Oriented Programming, automated Unit testing and source control with Git.
- > Good understanding of software engineering principles (SOLID, CQS, DRY, etc.) and design patterns.
- > Strong eye for design and code quality. Experience in reviewing peers' code is a plus.
- > Good communication and strong teamwork skills.
